

Breathtaking Kythera

By John Fardoulis

Another project in the pipeline is a photography book on Kythera. Even though many worthy photographers have already captured excellent images of the island, in my case, a lot of new perspectives will be presented. Plus inspiring the public regarding Kythera's favourite sights.

Exploratory technology is being used, ranging from protecting cameras in underwater Scuba cases for seldomly seen underwater images around the island, to hexacopters, capable of carrying cameras up to 500 metres

in the air. Not forgetting traditional high-end professional photography techniques. The intimate aerial perspective is unique for example - not possible from any overlooking buildings, satellites or aeroplanes. Close view aerials at interesting angles from just above rooftops.

Plus exploration by boat, a lot of offroad driving and hiking required to reach remote locations, bringing breathtaking parts of the island to your living room.

Here's a few samples for starters.

A view of the Moudari lighthouse from about half way up, looking across the strait of Eilatissos. Considering that Kythera is located in the middle of busy shipping lanes, this has been a strategic location for thousands of years. The image was taken by a camera mounted on my unmanned, remotely controlled hexacopter.

Moudari Lighthouse

The propeller is located at a depth of 28 metres.

(left) The propeller of the Nordland shipwreck at Diakofiti (pictured above), which has grown to be a landmark, one of the first seen on the island by visitors arriving by ferry. Few people have dived to the bottom to see the propeller first-hand.

Photography is covered underwater, in the air, offroad, and everywhere else in between.

The Kastro, Chora

Agios Minas, Dialofoi

Dialofoi

(Top & Below) A new bird's eye perspective (taken by a camera on a hexacopter) above the Kastro in Chora. The main structures in view are the archives building and Panagia Myrtilotissa church, overlooking Kapsali, with Hydra island visible in the distance.
